***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance:

The Uemoto reference discloses a battery comprising: a group of electrode "1" containing a positive electrode plate "2" and a negative electrode plate "3" spirally wound around an axis of the group of electrode as an electricity generating element housed in a battery can "27"; a pair of negative terminal "27" and positive terminal "32" wherein the positive terminal "32" is secured to the lid "31" of the battery; a current collector plate "25" that is connected to an edge of an electrode at one end of the group of electrode "1" to electrically connect the electrode body to the positive terminal "32"; and heights "25a" that are protrusively formed on a surface of the current collector plate and extends in the direction of the axis of the electrode body on a side of the current collector plate not connected to the edge of the electrode that is welded to a base portion "28" of the positive terminal to form a welded surface between the heights and the base portion (See paragraph [0020],[0021],[0022],[0023] and Drawing 1).

However, Uemoto et al does expressly teach one or more than one connecting piece that is welded to a flange portion of a base portion of the one of the negative and positive electrode terminal assemblies, wherein the flange portion extends from the base portion in the direction of the axis of the electrode unit on a side of the base portion facing the current collector.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
